The ART Exposure Analysis:

A stepwise approach that saves time and resources, helping to pinpoint the most pressing issues or areas of vulnerability

The Assess Step

The **ART assessment** is designed to clearly and efficiently identify the underlying causes and components of vulnerability and risk

The assessment has three parts:

 Assessment questions that help efficiently gather information needed for action identification

 Review and validation of assessment outcomes by stakeholders, asset managers, local and topical experts

A Step-wise Exposure Analysis

Determine if data, maps or studies are available for the selected climate impact scenarios

NO

YES

Gather available data and analyze exposure using:

- Print/paper maps
- On-line mapping tools
- Geospatial data

Ground truth exposure maps and findings with local experts

Flag areas where further investigation may be needed

Investigate trouble spots, cross-reference with assessment outcomes, and conduct refined analysis and mapping where necessary

 Use a scenario planning approach

- Re-purpose or reanalyze existing data
- Conduct new studies or analyses

Results in a **robust and transparent vulnerability assessment** that makes the case for adaptation

Helps establishes a clear roadmap for taking action by identifying localized problems that can be addressed early and system-wide issues that will require long term collaborative problem solving

Ground truth findings with local experts and flag trouble spots

Conduct refined shoreline analyses to pinpoint problems

Identify resilience building actions and implementation options

> Investigate feasibility

Example: ART Alameda

Initiated in 2010, the ART Alameda **County Project** was the first cross jurisdictional, multisector adaptation planning effort to evaluate sea level rise and storm event flooding in the Bay Area

Project Area

Working Group

ART emphasizes close collaboration among stakeholders to ensure a shared understanding of the issues, build trust, and achieve buyin for shared solutions and joint action

Asset Categories

- Airport
- Community characteristics
- Community services
- Contaminated lands
- Energy, pipelines and telecom
- Flood control
- Hazardous material sites
- Ground transportation
- Parks and recreation
- Natural shorelines
- Residential land uses
- Seaport
- Storm water
- Structural shorelines
- Wastewater

Inundation maps

Example:

ART Alameda

Available inundation maps were too coarse and out of date, so ART developed project-specific maps using available topographic and water level data

Shoreline studies

Example: ART Alameda

In addition, detailed studies were conducted to understand where and when the shoreline in the project area was vulnerable

Seven types shoreline identified:

- Engineered Flood Protection
- Engineered Shoreline
 Protection
- Embankments
- Transportation Structures
- Non Engineered Berms
- Wetlands
- Natural Shoreline/Beach

Overtopping potential was determined to inform where the existing shoreline would be lower than the water surface elevation of different sea level rise and storm scenarios

Example:

ART Alameda

Different measures were used to understand overtopping potential, including length and percent of shoreline overtopped, and average and maximum overtopping depth

Figure 5-1. Representative Shoreline Cross Section Illustrating Overtopping Depth and Freeboard

Maps were reviewed locally

Disconnected Areas > 1 Acre

Elevation / MHHW

Example:

ART Alameda

Flooding with only 12 inches of sea level rise???

Annual King Tides are about 12 inches higher than the daily high tide, yet flooding does not occur. What is going on?

Maps were ground-truthed

Example: ART Alameda

Locations identified by the shoreline delineation and the overtopping potential analysis as low spots were fieldverified to make sure they truly were problem areas

Maps were refined based on ground-truthing

Example:

ART Alameda

Flooding could occur with 36 inches of sea level rise

Figure 8. Roadway Cross Section of Intersection at Doolittle Drive and Harbor Bay Parkway

Figure 10. LiDAR Elevations at Site D

Refined maps were used to ID early actions

Example: ART Alameda

- Raise tide gate structure
- Raise and strengthen seawall or construct a living levee
- Elevate low sections of roadway and improve shoreline habitat elements

Refined maps supported future collaboration

Localized solutions will buy time, however eventually there will need to be broader, system-wide solutions to prevent flooding of the airport and Bay Farm Island community

Example:

ART Alameda

Adapting to Rising Tides Oakland/Alameda Resilience Study (www.adaptingtorisingtides.org)

Regionally available flood maps

Current flooding: FEMA Flood Insurance Rate Maps (FIRMs)

Future flooding: NOAA SLR viewer

NOAA Office for Coastal Management | Esri, HERE, DeLorme, METI/NASA, USGS, EPA, USDA

The "total water level" approach unlocks the NOAA SLR maps because one map = many futures

		Total water level above today's daily high tide, MHHW (inches NAVD88), by tide recurrence interval						
Sea Level Rise	MHHW (≈ daily high tide)	1-yr (≈ King Tide)	2-yr	5-yr	10-yr	25-yr	50-yr	100-yr (1% annual chance)
+0	0	12	19	23	27	32	36	41
+6	6	18	25	29	33	38	42	47
+12	12	24	31	35	39	44	48	53
+18	18	30	37	41	45	50	54	59
+24	24	36	43	47	51	56	60	65
+30	30	42	49	53	57	62	66	71
+36	36	48	55	59	63	68	72	77
±12	12		61	65	69	74	78	83
+48	48	60	67	71	75	80	84	89
+54	54	66	73	77	81	86	90	95
+60	60	72	79	83	87	92	96	101

One Map = Many Futures

NOAA SLR Viewer 4 feet

Permanent Inundation High tide with 48" SLR

Temporary Flooding

1-year tide with 36" SLR

25-year tide with 12" SLR

100-year tide with 6" SLR

Example Exposure Results

Three Land Llees Types					
Three Land Uses Types	Commercial	Industrial	Residential		
Current and future (50-year flood with 3 ft SLR) flooding	61	178	791		
Current 100-year flood only (FEMA FIRM)	194	127	726		
Total	255	305	1517		

Three Networks	Miles Exposed				
Three Networks	Bay Trail	Rail	Pipelines		
Current and future (50-year flood with 3 ft SLR) flooding	15	37	50		
Current 100-year flood only (FEMA FIRM)	18	16	63		
Total	33	53	113
